

GENERAL SKIN & MEDICAL INFORMATION

.....

To achieve the best results, your skin must be healthy, strong, and non-irritated. Unfortunately, not all clients are good candidates for permanent makeup due to their compromised skin condition or pre-existing medical conditions.

If you have any of the below conditions, you will not retain colour well and will not be a good candidate for the permanent makeup procedure.

Skin Conditions:

- Eczema / Dermatitis / Psoriasis / Rosacea / Shingles
- Ingrown hairs or acne on area to be treated.
- Severely oily skin or eyebrows. (colour retention will be very low or none at all)
- Large pores (pigment could bleed and result in powdered appearance)
- Moles / raised skin / piercings in or around eyebrow area. (pigment will not be deposited on those areas)
- Deep wrinkles (microstrokes may not lay properly increases)
- Eyebrow hair transplant
- Accutane (must wait 1 year before treatment)
- Extremely thin skin (bleeds very easy and will not be able to retain colour)
- Tanned or sunburned skin (must not tan 2 weeks prior to treatment)
- Use of Latisse or eyebrow growth conditioner (skin will be hypersensitive, discontinue use 2 months prior to procedure)
- Botox in the past 2 months

Medical Conditions:

- Pregnant or nursing
- Epilepsy
- Sick (cold, flu, etc.)
- Hemophilia or any bleeding disorders
- Diabetic
- Heart conditions / Pace Maker / Defibrillator
- Thyroid condition (Hypo, Hyperthyroidism, Graves Disease, Hashimoto's)
- Autoimmune Disorder
- Trichotillomania
- Chemotherapy (consult with Doctor – approval will be required)
- Viral Infections and or diseases
- Certain medications

If you fail to disclose any of the above skin conditions/medical conditions/medications, you will have a poor outcome and further touch-ups to improve the results will be at an additional cost or treatment may be declined.
